

LEAN

Doing MORE with LESS

Productivity strategies for your business

In this highly competitive environment, improving the productivity of your organization is a key part of any business strategy. LEAN thinking is a culture that does more with less – less effort, less equipment and less space while providing customers with what they want. LEAN works by identifying and minimizing activities absorbing resources and creating no value.

Why go Lean? By using “Lean thinking”, many firms have realized gains in productivity and profitability. Case studies from different industries will show how LEAN has improved efficiency and profitability. Understand the steps to “LEAN Thinking”, identifying waste and inefficiency, understanding productivity tools and effective decision making. For more information on LEAN visit www.albertacanada.com/productivity/lean.
